

Professional Summary

Data Engineer with around **5 years of industry experience** designing, building, and supporting **production-grade data pipelines** and analytics solutions across **Azure and AWS** environments. Strong expertise in **Python, SQL, PySpark and Azure Data Factory**, with hands-on experience in **ETL development, data modelling, workflow orchestration, and automation**. Proven ability to collaborate with cross-functional teams, translate business requirements into scalable technical solutions, and improve data reliability, availability, and operational efficiency.

Education

University of New Haven, West Haven, CT
Masters, Data Science

Aug 2023 - May 2025

Professional Experience

Cognizant | Programmer Analyst

Oct 2021 - Aug 2023

- Designed, built, and maintained **end-to-end Azure data pipelines** using **Azure Data Factory, Azure Databricks, and ADLS Gen2**, implementing **medallion architecture (Bronze/Silver/Gold)** to support scalable ingestion, transformation, and analytics workloads.
- **Owned and optimized PySpark and Spark SQL workloads** in Azure Databricks processing **tens of millions of records per run**, identifying and resolving performance bottlenecks related to **partitioning, joins, and data skew**, and improving pipeline runtime and stability in production.
- **Owned production-grade Azure data pipelines**, implementing orchestration, scheduling, monitoring, and alerting using **Azure Data Factory**, and proactively troubleshooting pipeline failures and data delays in production, reducing incident recurrence and manual recovery efforts.
- Partnered with **data science teams** to prepare high-quality, analytics-ready datasets and feature inputs, reducing data-related issues during model training and improving experiment stability.
- Established **data validation, reconciliation, and quality checks** across ingestion and transformation layers in collaboration with QA teams, improving data accuracy and consistency across reporting datasets.
- Worked closely with **business and analytics stakeholders** to define KPIs and deliver automated reporting datasets and dashboards, reducing ad-hoc reporting requests and accelerating decision-making cycles.
- Created and maintained **technical documentation** for data pipelines, data models, and operational workflows, helping reduce onboarding time for new team members.
- Contributed as a hands-on engineer in **Agile/Kanban delivery environments**, consistently meeting sprint commitments and supporting on-time delivery across multiple concurrent data initiatives

Accenture | Application Development Analyst

Dec 2018 - Oct 2021

- **Designed and implemented PySpark and Spark SQL pipelines in Azure Databricks**, processing **2TB+ of structured and semi-structured data weekly**, reducing report generation time and enabling faster enterprise analytics.
- Developed and deployed **4+ interactive Power BI dashboards** used by **20+ business users**, providing near-real-time insights, reducing manual reporting errors and supporting faster operational decision-making.
- Implemented robust data quality, cleansing, and validation frameworks in PySpark, catching more anomalies before downstream consumption, ensuring reliable and accurate analytics.
- Partnered with pricing, operations, and audit teams to translate business requirements into end-to-end data and BI solutions, accelerating monthly reporting cycles and improving stakeholder confidence in analytics outputs.
- Led unit and regression testing for ETL pipelines in collaboration with QA, ensuring production-ready, high-quality data deliverables by reducing production data errors.

Skills

Programming & Querying: Python, SQL, Java, PySpark

Databases: SQL Server, Oracle

Big Data & Data Engineering: Azure Data Factory (ADF), Azure Databricks, Apache Spark, Delta Lake, ETL/ELT frameworks

Cloud Platforms: Microsoft Azure (Primary), AWS

ETL & Workflow Orchestration: Azure Data Factory, Azure data pipelines

Analytics & BI: Azure Synapse, Azure SQL, Azure Data Lake Gen2, Power BI

Tools: Agile, Kanban, Jira, ServiceNow

Certifications and Achievements

Microsoft Azure Fundamentals (AZ-900)

AWS Certified Data Engineer – Associate (DEA-C01)

Star of the Month Award (multiple times), Accenture — for strong performance and consistent project contributions
